# Owen's Extra Practice • week of Oct 17

Name: _____ Date: _____

This week: Mean (average) • Median, mode & range • Multi-step money problems • Decimal operations

Show your work on scrap paper. Check: does the answer make sense?

**1** Quiz scores for a class team: 78, 92, 85, 92, 70, 88, 92, 81.
Find the range.

Answer: _____

**2** Quiz scores for a class team: 78, 92, 85, 92, 70, 88, 92, 81.
Find the mode.

Answer: _____

**3** Quiz scores for a class team: 78, 92, 85, 92, 70, 88, 92, 81.
Find the median.

Answer: _____

**4** Quiz scores for a class team: 78, 92, 85, 92, 70, 88, 92, 81.
Find the mean.

Answer: _____

**5** Hours of sleep each night for one week: 7, 9, 8, 6, 9, 10, 8.
Find the mean. Round to the nearest tenth.

Answer: _____

**6** Maya found the mean of 12, 15, 9, 14 like this:
12 + 15 + 9 + 14 = 50, then 50 ÷ 2 = 25.
What went wrong?

- ◯ A. She divided by 2. There are 4 numbers, so divide by 4: 50 ÷ 4 = 12.5.
- ◯ B. She added wrong. The sum is 60, so the mean is 30.
- ◯ C. Nothing. The mean is 25.
- ◯ D. She should use the middle number, 13.5, instead.

# Owen's Extra Practice (continued)

**7** The mean of 5 test scores is 86. Four of the scores are 80, 90, 84, 88.
What is the fifth score?

Answer: _____

**8** 6.4 + 12.75 + 0.9 = ?

Answer: _____

**9** 50 − 17.36 = ?

Answer: _____

**10** 3 × 14.85 = ?

Answer: _____

**11** 7.5 ÷ 0.25 = ?

Answer: _____

**12** Leo buys 3 movie tickets at $11.75 EACH and one popcorn combo for $8.40.
What is the total cost?

Answer: $ _____

**13** Nina buys 4 notebooks at $2.89 each and a backpack for $12.50. She pays with a $30 bill.
How much change does she get?

Answer: $ _____

**14** Sam bought 2 shirts at $15.60 EACH and a hat for $9.25. He wrote:
15.60 + 9.25 = $24.85
Which explanation is right?

- ◯ A. He lined up the decimals wrong. The total is $248.50.
- ◯ B. He forgot the 2 shirts: 2 × 15.60 + 9.25 = $40.45.
- ◯ C. He is right. The total is $24.85.
- ◯ D. He should subtract: 15.60 − 9.25 = $6.35.

# Owen's Extra Practice (continued)

**15** A 6-pack of juice boxes costs $4.50. Single juice boxes cost $0.95 each. How much do you save by buying the 6-pack instead of 6 singles?

Answer: $ _____

# Answer Key (grown-ups)

**1. 22** — Median, mode & range

Range = greatest − least = 92 − 70 = 22.

**2. 92** — Median, mode & range

Mode = the value that shows up most often. 92 appears 3 times.

**3. 86.5** — Median, mode & range

Put them in order: 70, 78, 81, 85, 88, 92, 92, 92. There are 8 values, so average the two middle ones: (85 + 88) ÷ 2 = 86.5.

**4. 84.75** — Mean (average)

Add all 8 values: 678. Divide by how many there are (8): 678 ÷ 8 = 84.75.

**5. 8.1** — Mean (average)

Sum = 57. There are 7 nights, so 57 ÷ 7 = 8.143..., which rounds to 8.1.

**6. A. She divided by 2. There are 4 numbers, so divide by 4: 50 ÷ 4 = 12.5.**

The mean is the sum divided by HOW MANY numbers there are. Count them: 4.

**7. 88** — Mean (average)

Total needed = mean × count = 86 × 5 = 430. Known total = 342. Fifth = 430 − 342 = 88.

**8. 20.05** — Decimal operations

Line up the decimal points: 6.40 + 12.75 + 0.90 = 20.05.

**9. 32.64** — Decimal operations

Write 50 as 50.00, then subtract: 50.00 − 17.36 = 32.64.

**10. 44.55** — Decimal operations

14.85 × 3: 14 × 3 = 42 and 0.85 × 3 = 2.55, so 42 + 2.55 = 44.55.

**11. 30** — Decimal operations

Move both decimal points 2 places right: 750 ÷ 25 = 30.

**12. $43.65** — Multi-step money problems

"Each" means multiply first: 3 × 11.75 = 35.25. Then add: 35.25 + 8.40 = $43.65.

**13. $5.94** — Multi-step money problems

Notebooks: 4 × 2.89 = 11.56. Total spent: 11.56 + 12.50 = 24.06. Change: 30.00 − 24.06 = $5.94.

**14. B. He forgot the 2 shirts: 2 × 15.60 + 9.25 = $40.45.** — Multi-step money problems

Read "EACH" as a signal to multiply before you add.

**15. $1.20** — Multi-step money problems

6 singles: 6 × 0.95 = 5.70. Savings: 5.70 − 4.50 = $1.20.
