Number Bonds: 2-digit × 1-digit

Name: _____ Date: _____

Break the big number into TENS and ONES, multiply each part, then add the two answers (partial products).

Worked example: 34 × 6

Step 1: Break it apart.

34 = 30 + 4 (3 tens and 4 ones)

Step 2: Multiply each part by 6.

30 × 6 = 180

4 × 6 = 24

(think 3 × 6 = 18, then add a zero)

Step 3: Add the partial products.

180 + 24 = 204

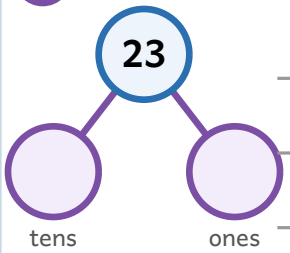

So 34 × 6 = 204

Tips:

- The tens part always ends in 0 (like 30, 50, 80).
- Multiply the tens with a fact you know, then put the 0 back:
  50 × 7 is 5 × 7 = 35, so 350.
- Check: does your answer make sense? 34 × 6 is a little more than 30 × 6 = 180.

Try one together: 23 × 4

0 **23 × 4 = _____**

_____ × 4 = _____

_____ × 4 = _____

_____ + _____ = _____

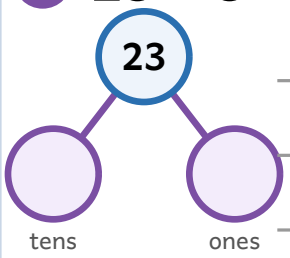

(Answer: 20 + 3; 80 + 12 = 92)
